# JACKPOTS

Kiron is proud to announce the release of its new jackpot feature on its omni-channel RGS, BetMan, now available on its online and in its retail environments. Players will have more winning opportunities with this captivating game feature presented across BetMan's games portfolio. A percentage of each qualifying ticket that is successfully placed will contribute to the Jackpot prize. The lucky draw takes place at random performed by a certified RNG.

## WHY HAVE THIS FEATURE?

- Promote game play and revenue growth,
- Easily configure multiple jackpots for a specific game or across multiple games,
- Jackpots are pool based and driven by ticket sales.
- Jackpots can be seeded if desired.
- Jackpots can be set with varying pay frequencies.
- Jackpot draws are performed by a certified RNG.
- Jackpots are attractively presented to players.
- Minimum bet entry qualification levels can be set.

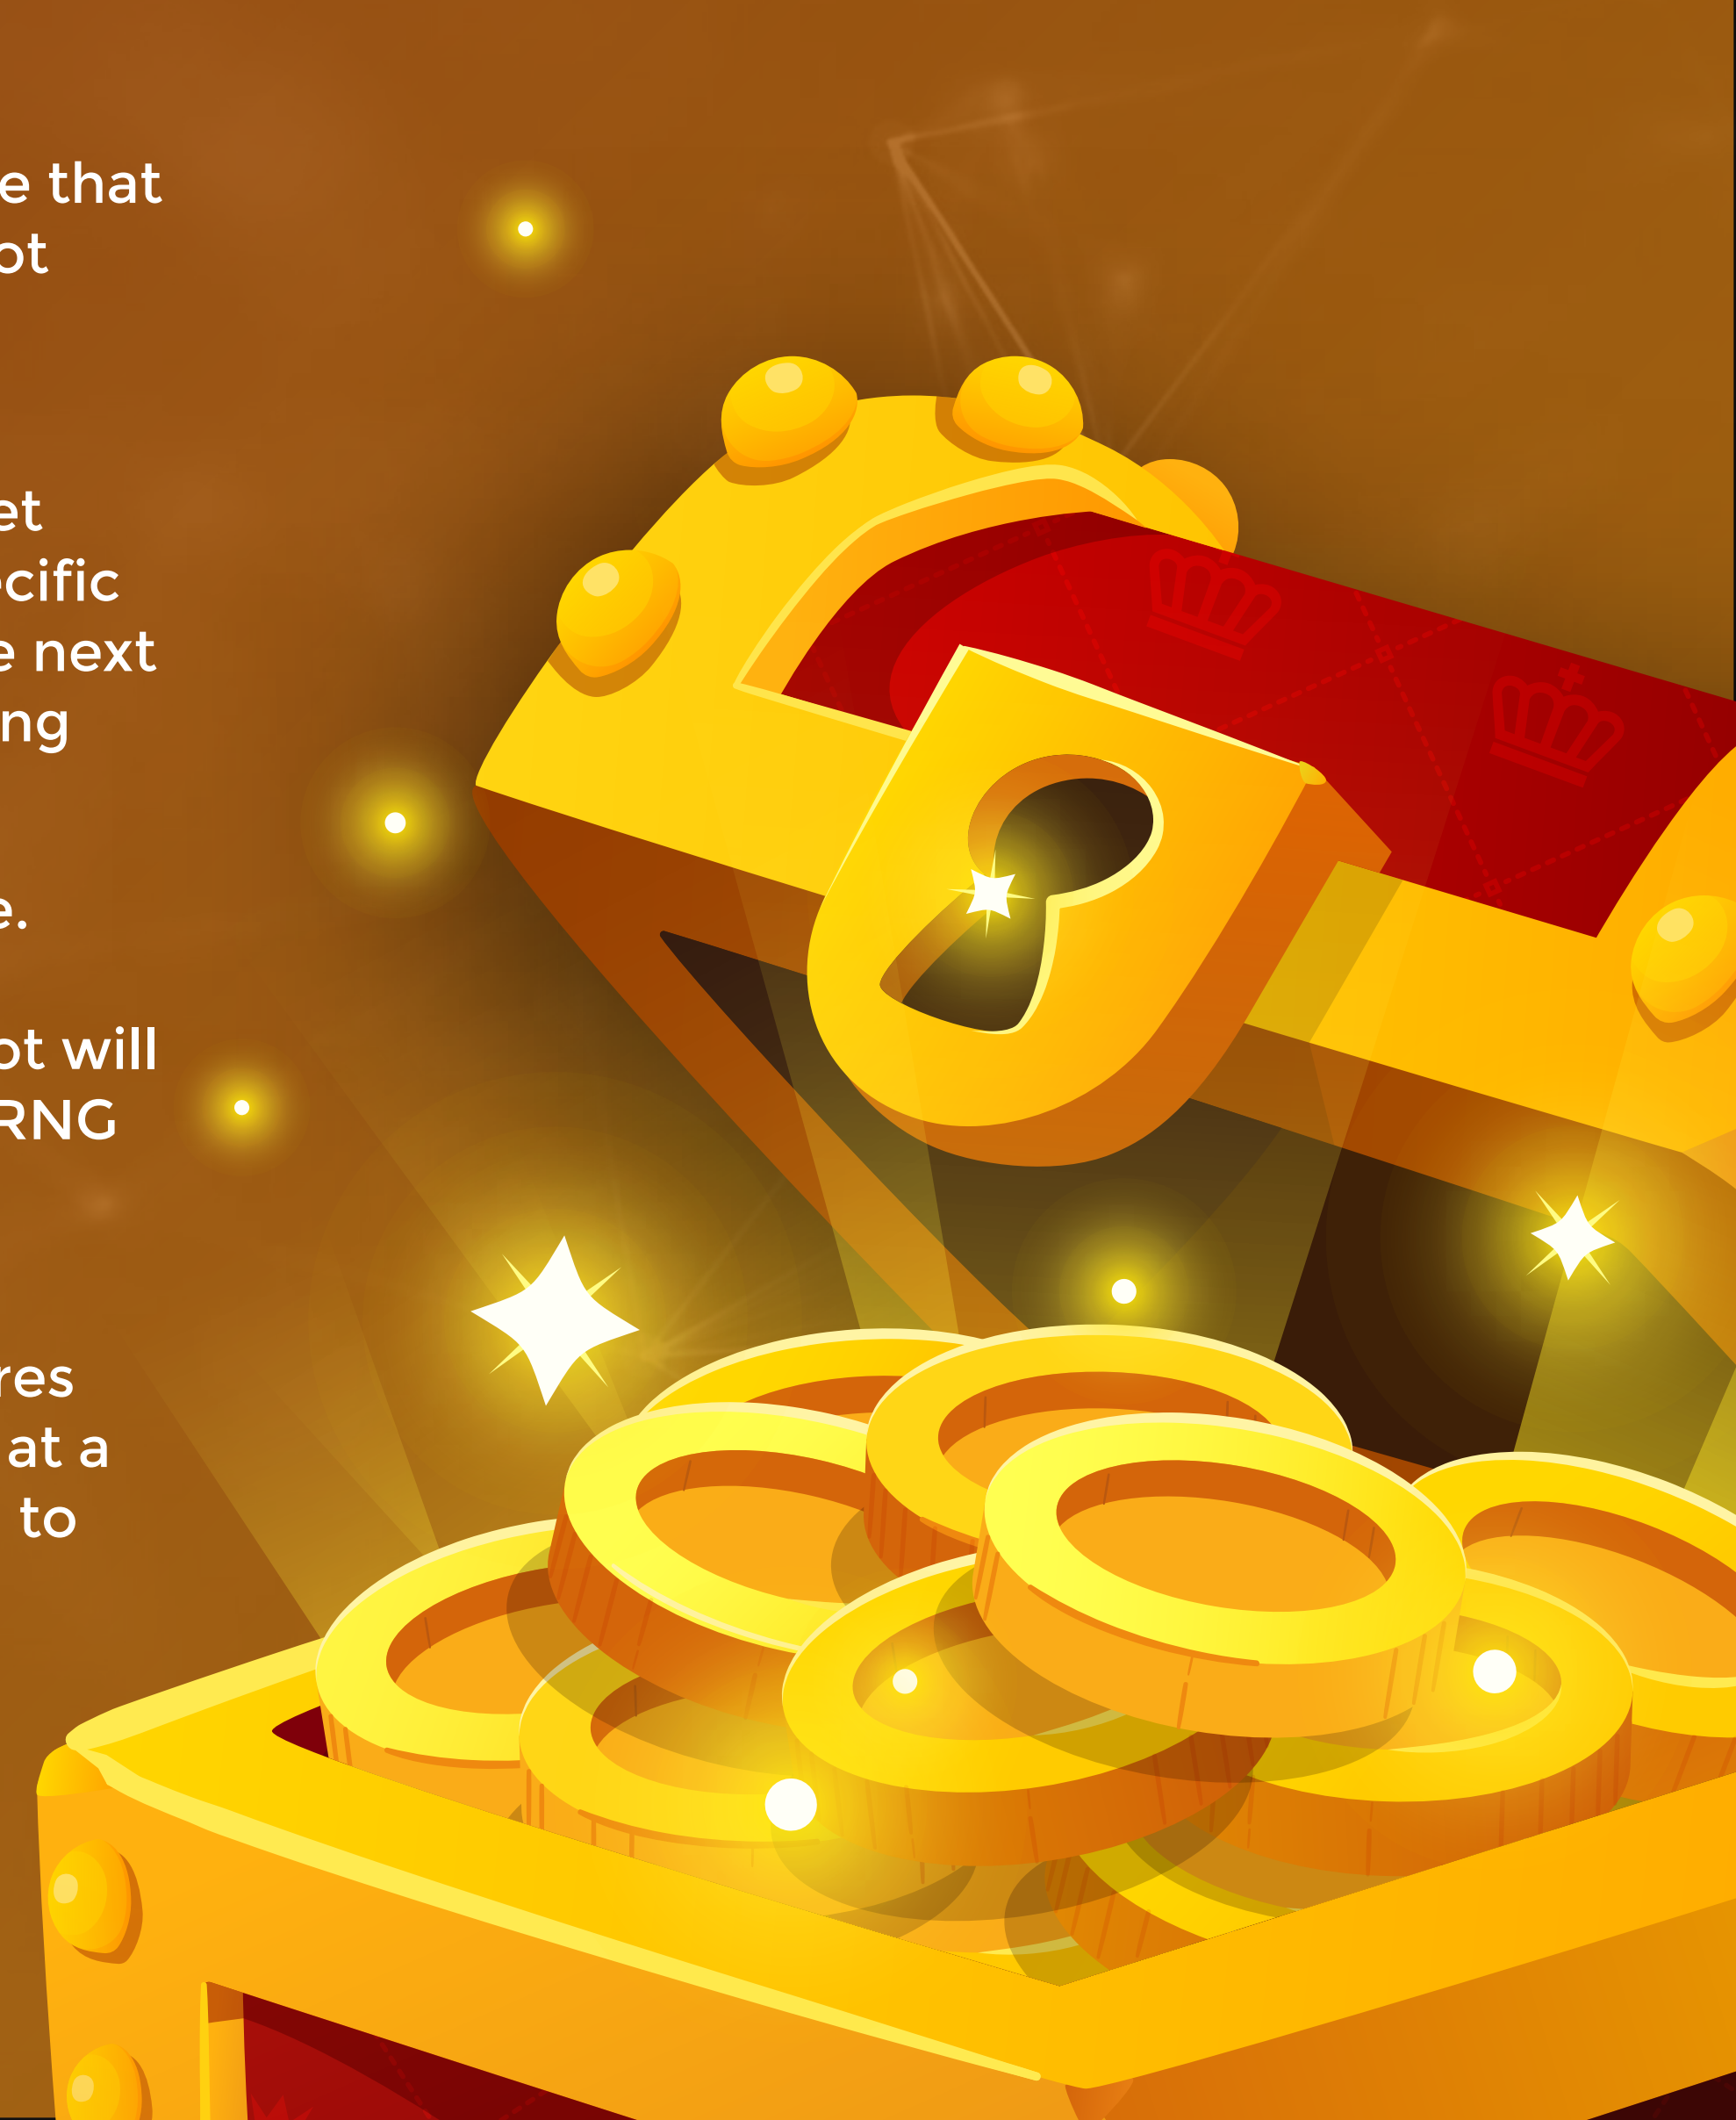

# KEY FEATURES

- Multiple jackpots can be setup at your convenience,
- Jackpots can be localised and are setup per currency,
- Jackpots can be named to suit advertising or marketing campaigns,
- Easily specify when you would like start the jackpot,
- Set minimum bet stake. (The minimum entry requirement for a bet to qualify in the jackpot draw)
- Activate an initial seed value. (Value at which the jackpot will start)
- Set value at which jackpot will start to increment to allow jackpot allocation to accumulate.
- Select which games you would like to run a jackpot draw on,
- Specify which outlet you would like to apply the jackpot to, should you have multiple outlets in your group setup.

- Determine sales allocation percentage. (The % of ticket value that is allocated to this specific jackpot current draw)
- Define next draw allocation percentage. (This is the % of ticket value that is allocated to this specific jackpot next draw. Therefore, the next jackpot draw is ready to promoting constant player interest)
- Specify draw start and end range. (This is the jackpot value range between which values the jackpot will be randomly drawn). A certified RNG is used to draw the jackpot.
- Define Payout Yield. (A key risk management override that ensures the jackpot value will be capped at a specific level should the RNG fail to draw it at the end range value).
