HOW TO CALCULATE WINS

- *To calculate your total payline win, calculate all payline wins and add them together.
- *To calculate a single payline win, count the number of identical symbols lined up in sequence on the line starting from the leftmost reel.
- *If three or more identical symbols are lined up, find the win value in the dynamic Pay Table. Only the highest winning combination per line is paid out.
- *If the winning combination starts with three wilds, there can be many ways to interpret the win. In this scenario, only the highest win combination is paid out.
- *The above doesn't include Coins and Gems(Scatters) which do not need to be on a payline.
- *Coins have their own values which are collected from Base Game or Bonus Games and awarded to the player.
- *After the Bonus Game round is completed, all wins are added to any win from the game that activated the feature.
- *The game has a win cap of {{maxExposure}} bet.{{#ifEq resetBuy false}} Any wins exceeding this amount are forfeited.
