Business Case

- Gorgeous graphics that capture the traditional spirit of Halloween.
- Up to 20 Free Games with a multiplier of up to $\times 10$ keeps players chasing exciting big wins.
- A 5-of-a-kind Wild win awards players a massive $10,000\times$ their line bet.

Symbol Details

Wild

The Wild symbol is the carved Halloween pumpkin. The Wild symbol can stand for any other symbol, except Scatter and Bonus, to make the best possible winning combination.

There is also a separate payout for 2 or more Wild symbols on an active payline. The Wild symbol win is paid out instead of the regular symbol win if the win amount from Wild symbols is larger than the win from the regular symbols.

Scatter

The Scatter symbol is the Halloween Fortune logo. The Scatter payout is awarded to players when 3 or more Scatter symbols appear anywhere on the reels. The payout for the Scatter symbols is multiplied by the total bet and added to the payline winnings.

Bonus

The Bonus symbol is the witch's cauldron. The Bonus symbol can only appear on reels 1 and 5. When the symbols appear in any position on these reels simultaneously, the Witches' Brew Bonus game is triggered.

Game Features

Witches' Brew Bonus

The Witches' Brew Bonus game is triggered when 2 Bonus symbols appear simultaneously on reels 1 and 5 during the main game.

In the first stage of the bonus the player selects 1 of 3 witches to reveal the number of free games won. In the second stage the player selects 1 of 6 potions to reveal the size of the win multiplier applied to the free games. The maximum number of free games that can be won is 20 and the maximum size of the win multiplier is $\times 10$.

During the free games round the reels are spun automatically, using the same number of lines and bet per line as on the spin that won the bonus feature. If there are Bonus symbols on reels 1 and 5 during a free spin, the player wins a random number of additional free games with the same multiplier.

Dollar Ball Feature

Dollar Ball is a lotto-type Progressive side game that is attached to some slot games and can be enabled or disabled at any time by the player.

If the Dollar Ball game is enabled, the player picks 5 numbers out of 49. On every main game spin, 5 numbered lottery balls are randomly drawn. The player will win cash prizes if the numbers on the lottery balls match their chosen numbers. The more matching numbers that are drawn, the larger the win. If all 5 numbers match, the player wins the Dollar Ball Progressive Jackpot!

An additional side bet which contributes to the Dollar Ball Progressive Jackpot is invested in every main game spin when the Dollar Ball side game is activated.

Dollar Ball is played alongside every main game spin when it is active, with the same selection of numbers, until the player either changes the numbers or disables the Dollar Ball side game.

Dollar Ball Feature is available only for **Flash client platform**.

Every casino operator should set a house exposure policy, which defines the maximum win amount it is willing to pay out on a single game round. The way to limit the house exposure is by limiting the maximum bet a player can place on a single game round.

For every game we calculate the maximum win multiplier from a single round (see “Maximum Overall Win” in the above table). Dividing the operator’s maximum exposure policy by the game’s maximum win multiplier will give us the maximum bet which the operator should allow in the game.

For example:

- Maximum win multiplier = 100,000 × Line Bet
- Operator’s max exposure policy: €2,500,000
- **Maximum allowed total bet = €2,500,000 / €100,000 = €25**

Game limits of all new games must ALWAYS be reviewed and, if necessary, adjusted by the casino operator prior to the game’s release to production. Failure to set the required maximum limit may result in the casino’s exposure to large player wins.

For instructions on how to configure the game limits in the IMS, thereby controlling the level of exposure, see the last section of this document [Default Game Limits and Configuration](#). As always, licensees are welcome to contact their Account Manager for further assistance in understanding and configuring game limits.

Default Game Limits and Configuration

Overview

To control the level of exposure of any casino game, its limits must be studied and configured correctly, following the casino's exposure and risk policy. The default limits assigned by Playtech at the time of upload can be re-configured through the **Game Limits** page in the IMS.

You can specify separate line bet values for the Mobile platform if you select "Casino" as the client type and "Mobile" as the client platform.

Casino operators must review the default limits of new games in the various supported currencies and re-configure them in the IMS, according to their policy.

The limits can be viewed and modified when the casino is still in preview mode. This enables casino administrators to fine-tune the limit definitions before switching the games to production, thereby eliminating any possibility of unwanted exposure.

Default Line Bet Values at Upload

At the time of upload, Playtech sets the maximum line bet to such a value that the maximum house exposure will be under €2,500,000 (2.5 million Euro) for games running on the casino server. For games running on the GTS Container, Playtech sets MAX WIN value to €500,000.

It is highly inadvisable to exceed the pre-set win capping values and game limits.

Playtech will upload the game with the below default line bet values (note how the maximum line bet in the list is per Playtech exposure policy):
