HOW TO CALCULATE WINS WITH “WAYS TO WIN”

- To calculate the total Ways win, add all the symbol wins together.
- To calculate a single symbol win, count the number of consecutive reels that contain the symbol, starting from the leftmost reel.
- If the number of consecutive reels containing the symbol is 3 or greater counting from the left or rightmost reel, find the corresponding win amount in the dynamic pay table.
- If any of the reels contain more than 1 instance of the symbols, the win will be multiplied. Multiply the number of symbols on each of the reels to get the final multiplier. For example: if the first reel contains 2 symbols, the second reel has 3 symbols and the third reel has 2 symbols, the total multiplier is counted as follows: $2*3*2=12$ (total multiplier).
- The above doesn't include Free Spin symbols which do not need to be on consecutive reels to award a prize.
- After the Free Spins round is completed, all wins are added to any win from the game that activated the Free Spins.
- There can be a discrepancy between sum of the individual wins in collection Free Spins from what is displayed in the total win end screen. The total win end screen displays the final rounded win.
- The Wild symbol substitutes for any symbol except the Diamond symbol.

RETURN TO PLAYER

- The expected payback reflects the theoretical return across a very large number of spins by numerous players over an extended period of time.
- The overall theoretical return to player is 96%.
- The maximum recorded win is 100.000 and it happened once in 1.000.000.000 simulated game rounds
- The RTP calculation is based on the statistical analysis of the game logic using the optimal strategy.

RANDOMIZATION

- The reels are spun with a fair and equal chance for each stop position by a certified random numbers generator. For more information, visit <http://www.yggdrasilgaming.com/en/about-us>
