#### HOW TO CALCULATE WINS WITH “WAYS TO WIN”

- To calculate the total Ways win, add all the symbol wins together.
- To calculate a single symbol win, count the number of consecutive reels that contain the symbol, starting from the leftmost reel.
- If the number of consecutive reels containing the symbol is 3 or greater counting from the leftmost reel, find the corresponding win amount in the dynamic pay table.
- If any of the reels contain more than 1 instance of the symbols, the win will be multiplied. Multiply the number of symbols on each of the reels to get the final multiplier. For example: if the first reel

contains 2 symbols, the second reel has 3 symbols and the third reel has 2 symbols, the total multiplier is counted as follows:  $2*3*2=12$  (total multiplier).

- The above doesn't include Free Spin symbols which do not need to be on consecutive reels to award a prize.
- After the Free Spins round is completed, all wins are added to any win from the game that activated the Free Spins.
- There can be a discrepancy between sum of the individual wins in collection Free Spins from what is displayed in the total win end screen. The total win end screen displays the final rounded win.
